

Amendments to the Specification:

Please replace the fourth full paragraph on page 7 of the Specification with the following amended paragraph:

That is to say, of this 41 eV, about 27 eV is emitted as the catalytic transfer of energy occurs, and the remaining 14 eV is emitted on restabilisation [[to]] of the force balance.

Please replace the third full paragraph on page 19 of the Specification (carrying over onto page 20) with the following amended paragraph:

Electrolyte comprising deuterium oxide, in combination with ordinary “light” water in varying proportions, and containing high-molarity salts of, but not exclusively of, potassium~~[,]~~[[,]] or rubidium~~or lithium~~, or combinations of such salts, is pumped through chamber 80, in a direction such that the anode is downstream of the cathode.
